ABSTRACT

Pyridine nucleus plays an important role in medicine, agriculture and industrial chemistry. With a view of biological activities and variety of industrial applications, some new 2" – amino - 4" - [2 - (4' -chlorophenyl)-6-methyl imidazo [1, 2-a] pyridin-3-yl]-6"-aryl nicotinonitriles (4a-4l) have been synthesized. The products have been assayed for their biological activity against Gram +ve, Gram –ve bacteria and fungi. Some of the products showed moderate activity in concentration 50µg/ml. The structures of the products have been elucidated by IR, 1H-NMR, Mass spectral data, elemental analysis and thin layer chromatography.

1. INTRODUCTION

Imidazo[1, 2-a] pyridines are potential bioactive agents due to their wide spectrum of therapeutic importance. A large number of substituted imidazo[1,2-a]pyridine derivatives are prepared and tested for varieties of biological activities such as, Antiallergic\(^1\), Antagonist\(^2,3\), Antifungal\(^4\), Antiepileptic\(^5\), Antibacterial\(^6\), Anticonvulsant\(^7\), Antitubercular\(^8\), Analgesic\(^9\), Insecticidal\(^10\), Antisoriasis\(^11\), Antihypertensive\(^12\) etc. In view of getting to synthesized imidazo [1, 2-a] pyridines derivatives and evaluated for their antibacterial activity and antifungal activity.

Pyridine nucleus has been extensively explored for their applications in the field of medicine, agriculture and industrial chemistry. Although many substituted pyridine compounds like other heterocyclic compounds are synthesized with their functional group present from cyclic compounds. The simple pyridine compounds are prepared by the cyclization of aliphatic raw material. The availability of 3-cyanopyridines, nicotinamide and nicotinic acid make possible their use as synthetic intermediates.

In the past years, considerable evidence has been accumulated to demonstrate the efficiency of cyanopyridines. To further assess the potential of such class of compounds, cyanopyridine derivatives of 2" – amino - 4" - [2 - (4' -chlorophenyl)-6-methyl imidazo [1,2-a] pyridin-3-yl]-6"-aryl nicotinonitriles have been prepared, by the cyclocondensation of 2-(4' -chlorophenyl)-6-methyl-3-(1"-aryl- 2"-propene-1"-one-3-yl) -imidazo [1,2-a] pyridines in presence of malononitrile and ammonium acetate.

The products (4a-4l) were assigned the IR, 1H-NMR, Mass spectral data, elemental analysis and TLC. The physical data and antimicrobial activities are represented in Table – I.
